

Patient: Molly

Age:63

MRN: XXXX

Date: Today

Diagnosis: CHF

Completed by: PT

AM-PAC™ “6 Clicks” Basic Mobility

Scoring: Each item on the assessment is scored from 1 to 4. Scores may be a minimum of 6 or a maximum of 24 points. A higher score indicates a higher level of functioning.

Raw Score: 7/24

Note: Molly required maximum assistance for bed mobility, chair transfers, ambulation, and she was not able to complete stairs at all.

Results Implications: Scores may be useful in determining the necessity of more than 1 PT or OT visit to the patient. Raw scores of 18 have correlated with 1 PT visit only needed and scores of 16 or less have correlated with more than 1 PT or OT visit. Additionally, initial scores of 18.1 correlated with patients admitted from living at home alone while initial scores of 12.0 correlated with patients being admitted from long-term care.
